NaturaLED Introduces Outdoor LED Area Light Fixture Specially Designed for Tennis and Pickleball Courts

Ontario, CA, April 22, 2024 – naturaLED® (www.naturaLED.com), a leading provider of innovative lighting solutions, introduces an outdoor LED area light specifically designed with custom optics that evenly light tennis and pickleball courts while reducing glare that's often associated with traditional lighting fixtures.

The SAL Court Light is a slim, low profile LED fixture with a black, die-cast aluminum housing that's IP66 rated for outdoor use. It's 420-watt LED power with over 63,000 lumens is the equivalent light output as traditional 1000W to 1500W metal halide fixtures. It's available in 4000K color temperature.

Unlike traditional area light fixtures with a type 3 or type 4 beam pattern, which have an oval light spread, the SAL Court Light by NaturaLED has a much wider beam to match the wide design of tennis and pickleball courts.

These fixtures also have an IK08 impact resistant rating and are DLC Premium listed making them eligible for various utility rebates. There are several contractor-friendly mounting options including pole arms, yoke mounts and slip fitters.

"Our team takes a creative approach to designing solutions to specific lighting application problems," said Frank Grobmeier, representative of NaturaLED. "This court light addresses the frequent complaints we've heard from tennis and pickleball players about lighting uniformity and glare on courts."

NaturaLED's LED Sports Court Light is ideal for municipal recreation applications as well as Club-Level and Competition-Level play.
